

***Pasteuria* technology a breakthrough for nematode control**

The commercial production of *Pasteuria* represents a revolutionary technology to help naturally control nematodes.

***Pasteuria* is naturally effective.**

Pasteuria is a group of naturally-occurring soil bacteria that specifically attack plant-parasitic nematodes. *Pasteuria* targets specific nematode types without harming other organisms.

***Pasteuria* is safe and environmentally friendly.**

Pasteuria is safe for humans, plants and animals. *Pasteuria* targets harmful nematodes without damaging plants. There are no known human exposure risks and no contamination risks for soil or the water table.

***Pasteuria* is convenient.**

Pasteuria has no special handling or storage requirements and it can be applied with conventional application equipment.

***Pasteuria* is cost effective.**

Pasteuria is produced through natural fermentation based on common methods.
